

# An efficient irrigation system can save you money

## Efficient irrigation water delivers multiple benefits

Ensuring your irrigation system is performing as expected delivers many benefits:

- Reduced water use
- Improved crop production
- Reduced 'wear and tear' on equipment
- Reduced energy costs.

## Know where to start?

Conducting a simple bucket test is the easiest way to investigate irrigation systems performance. But what do you do with the results and what do they tell you?

## Irrigation Efficiency Summer Student Programme is here to help

IrrigationNZ is running the annual programme from November through to February. This programme offers irrigating farmers;

- Robust testing of your irrigation system
- Independent expertise to help interpret the results
- Advice with next steps if issues are encountered.

Last season the programme was run in the Selwyn district with over 100 systems successfully tested.

*For more information or to register to take part in the programme contact IrrigationNZ or visit our website: [www.irrigationnz.co.nz/events-training](http://www.irrigationnz.co.nz/events-training)*
